Webinar: Strategies for Reducing the Energy Consumption of Buildings

Submitted by Marina Herriges on 27 Feb 2024

Friday March 1, at 12pm ET

This is the sixth in a series of webinars hosted by the AIC Sustainability Committee on reducing energy consumption in buildings where collections are stored, studied, and exhibited. Microclimates have been used as a tool for protecting sensitive items in a collection when temperature and humidity set points are kept at less stringent standards than a flatlined 70F, 50% RH. Three people with extensive and varied experience with microclimates will be sharing their knowledge and expertise: Michael Cataldi of Paradise Framing, Mike Dunphy of Small Corp, and Laura Gaylord Resch, Assistant Preventive Conservator at the Cleveland Museum of Art.

Registration is free and open to the public! Sign up now at: learning.culturalheritage.org/products/.
